

Business Recommendations Memo

Product Funnel & User Behavior Analytics | Google Merchandise Store | Aug 2016 – Aug 2017

To:	VP of Product & Marketing	Date:	August 2017
From:	Shivansh Mishra, Data Analyst	Dataset:	903,653 sessions 714,167 visitors

Executive Summary

Analysis of 903,653 sessions across the Google Merchandise Store reveals a 1.34% overall conversion rate generating \$1.78M in revenue. The store has strong returning-customer economics but significant untapped potential in three areas: mobile experience, top-of-funnel engagement, and channel optimization. The recommendations below are prioritized by estimated revenue impact.

Key Findings

Finding	Data Point	Business Impact
86% of visitors never view a product	Only 99K of 714K visitors reached a product page	Largest funnel leak; fixing this has the highest leverage
Mobile converts 4x worse than desktop	Desktop: 1.67% vs Mobile: 0.41% conversion	Mobile is 23% of traffic but only 3.8% of revenue
Returning visitors drive 75% of revenue	3.71% conversion vs 0.66% for new visitors	Retention is more valuable than acquisition
Social channel is non-converting	226K sessions, 0.06% conversion, 65% bounce	High spend with near-zero return
Weekday purchasing dominates	Tuesday: \$367K vs Sunday: \$72K revenue	B2B pattern; weekends are dead
20+ page sessions generate 74% of revenue	29% conversion rate for deep-browsing sessions	Session depth is strongest conversion predictor
Top 1% of customers drive 32% of revenue	101 customers averaging \$5,616 each	High-value segment needs dedicated retention

Prioritized Recommendations

1. Fix Mobile Checkout Experience (Estimated Impact: +\$200K–400K/year)

Mobile users account for 23% of sessions but generate only 3.8% of revenue. The conversion gap (0.41% vs 1.67%) suggests a broken or friction-heavy mobile checkout flow, not a lack of mobile interest. Conduct a UX audit of mobile checkout, implement guest checkout, reduce form fields, and add mobile payment options (Apple Pay, Google Pay). Even closing half the desktop–mobile gap would add \$200K+ annually.

2. Improve Top-of-Funnel Product Discovery (Estimated Impact: +\$150K–300K/year)

86% of visitors leave without viewing a single product. The homepage converts at only 1.39% while direct store pages convert at 10%. Implement prominent product showcases on the homepage, add personalized product recommendations, and create category-specific landing pages for ad campaigns instead of routing all traffic to the homepage.

3. Invest in Returning Visitor Retention (Estimated Impact: +\$100K–250K/year)

Returning visitors convert at 5.6x the rate of new visitors and drive 75% of revenue. Launch post-purchase email sequences targeting one-time buyers (90% of customers, only 58% of revenue). Moving just 5% of one-time buyers into repeat purchasers would generate approximately \$150K in additional annual revenue based on the average repeat-buyer spend of \$426.

4. Reallocate Social Channel Budget (Estimated Impact: Cost Savings + Reallocation)

Social drives 226K sessions with a 65% bounce rate and 0.06% conversion rate. Referral traffic, by contrast, converts at 5.29% with a 26% bounce rate. Reduce social media ad spend and redirect budget toward referral partnerships and SEO, which deliver significantly higher quality traffic.

5. Optimize Ad Scheduling for Peak Windows (Estimated Impact: +15–25% ROAS)

Conversion rates peak between 5PM–10PM (1.9–2.1%) and are lowest 6AM–10AM (0.15–0.45%). Weekdays outperform weekends by 3–4x in revenue. Concentrate paid media spend on Tuesday–Friday, afternoon-to-evening windows. Reduce or eliminate weekend and early morning ad spend to improve overall return on ad spend.

Analysis conducted using Google BigQuery (SQL), Python (Pandas, Matplotlib), and Looker Studio. Full query documentation and interactive dashboard available upon request.
